Catalogue specification

PRODUCT DECLARATION

Solvanta Labs declares this product to the stated identity and nominal content of 50 mg. The current release position is based on supplier qualification, batch records and prior independent screening used within the Solvanta quality process. Recognised third-party batch reporting is being added to the published verification programme.

| PRESENTATION     | NOMINAL CONTENT | QUALITY STATUS                     |
| Lyophilised vial | 50 mg per vial  | Released to internal specification |

SOLVANTA QUALITY STANDARD

| ATTRIBUTE      | SOLVANTA SPECIFICATION                                              | QUALITY POSITION                                                       |
|----------------|---------------------------------------------------------------------|------------------------------------------------------------------------|
| Identity       | Conforms to declared product identity                               | Qualified through supply-chain records and prior independent screening |
| Purity         | High-purity material meeting Solvanta internal release requirements | Accepted to current internal quality standard                          |
| Content / fill | Nominal content: 50 mg per vial                                     | Released to declared fill specification                                |
| Appearance     | Product-appropriate lyophilised material                            | Visual release check                                                   |
| Packaging      | Sealed, labelled vial with product and traceability identifiers     | Packaging release check                                                |
| Traceability   | Product and batch records maintained within Solvanta QC system      | Maintained                                                             |

VERIFICATION PROGRAMME

Solvanta Labs is transitioning the range to recognised third-party batch-specific Certificates of Analysis. Published COAs will provide the measured identity, purity and assay values for the relevant production batch. Until then, this document records the manufacturer's current product specification and quality declaration.
